

CE Analysis MD

Order No. 9068229

Basic CE analysis for machine manufacturers in accordance with the Machinery Directive

1 Description

In the case of the analysis for the Machinery Directive (MD), you will first receive a basic introductory consultation regarding the legal context and relevant terms. We will explain the procedures for assessing conformity to you, including the formal obligations according to the MD.

In the next step, we will analyze the basic requirements for your conformity process (based on a specific machine as an option) in the form of an interview. Here, the focus is on the completeness of the required documentation.

Safety aspects

The aim of the Machinery Directive is to reduce the number of accidents that occur when using machinery. This directive therefore requires that the aspect of safety is included in the design and construction of machinery. In addition, manufacturers must also make sure that the technical documentation required by the Machinery Directive has been created. It must also be ensured that the machinery is manufactured and produced in compliance with this technical documentation. The manufacturer of a machine or his authorized representative is responsible for this. Under certain conditions, operators can also become the manufacturer.

2 Result

You will know whether all of the documents required of you for the conformity assessment process according to the MD are present and any required measures to improve machine safety can be planned independently.

The following information will be communicated:

- Overview of laws
- Terms used in the context of conformity assessment
- Responsibility of manufacturers and operators
- Process for conformity assessment
- Analysis of the conformity assessment process

3 Documentation

Consultation document as a source of information for all requirements according to the MD, including checklists with a summary of the analysis results as well as possible resulting and/or required measures.

4 Duration and costs

Three hours at a fixed price

We will be happy to prepare a non-binding quote for you.

To request this, speak to your personal sales partner directly or contact the headquarters in your country.

5 Requirements

- Participation of at least one contact partner who can provide information about the analyzed machine
- Participation of at least one contact partner who is familiar with the processes for technical documentation
- The criteria for machinery according to the Machinery Directive must be met
- The Machinery Directive is the main directive for conformity assessment
