## **Consulting service integrated in management software**

(09/17) The Phoenix Contact mGuard Device Manager management software allows users to create and manage all safety-relevant mGuard settings centrally using a mouse. Widely distributed installations with thousands of systems are implemented quickly and efficiently. Starting in Version 1.7, a new consulting service is integrated in the product package. A Phoenix Contact employee provides remote access support to customers during initial commissioning.

These innovations will be implemented at the same time as the release of the new mGuard Device Manager Version 1.7 and the mGuard firmware versions 8.3 and 8.4. This ensures good service and customer proximity.
