

Press Release

Faster terminal strip service

(04/18) Phoenix Contact now provides a fast terminal strip service. Terminal strips with Push-in terminal blocks are produced in just 48 hours. The new PROJECT complete configuration and marking software supports the use of the terminal strip service with an online price generator and fast order function, thanks to its direct connection to the Phoenix Contact E-Shop.

If terminal blocks are to be used with different connection technologies, assembly will take just four days. A shipping time of one day must be added within Germany.

The requirements in control cabinet and switching device manufacturing are characterized by the production of large series batches on the one hand and dynamic individual solutions on the other. Cost efficiency and timely completion must be guaranteed in both cases.

As a switching device manufacturing partner, Phoenix Contact not only provides all of the products for control cabinets, but also provides support with a range of services. The terminal strip production service in particular provides help in managing order peaks flexibly, and enables terminal strips to be delivered just-in-time to series production. The fully assembled and marked terminal strips, already equipped with accessories, then simply have to be installed and connected.
