Inline boost terminal for the communications power U_L of 0.8 A, complete with accessories (connectors and labeling field)

Product description

The terminal is designed for use within an Inline station. If the maximum load of the bus coupler for the communications power (U_L) is reached, this terminal can be used to provide this voltage again. To do this, apply a 24 V DC voltage (U_{24V}) to the terminal. The communications power (U_L) is generated from this voltage.

Your advantages

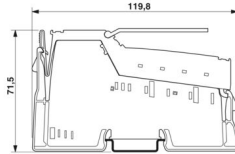

- Supply of the 24 V voltage for generating the communications power (U_L) up to 0.8 A
