Inline, Inline function terminal, Counter input; Counter input for 24 V signals: 1; Control input for 24 V signals: 1; Switching output: 1, 24 V DC (0.5 A); transmission speed in the local bus: 500 kbps; degree of protection: IP20

Product description

The terminal is designed for use within an Inline station. The counter terminal acquires and processes fast pulse sequences from sensors. It has a counter input (source), a control input (gate), and a switching output that can be freely parameterized. The switching output is set independently of the terminal. Fast response times can therefore be achieved, which are independent of both the bus and controller. The terminal can be operated in four different operating modes: frequency measurement, event counting, time measurement, and pulse generation (pulse generator).
